Grant Toole 2nd Place Winter Drop DSE Section

Breeding Strategy of the Blink Bonnie Flock

Main aims: Produce wool of MF4 quality, visual 64/66's
- that tests finer than it looks and have a positive
correlation between higher fleece weight and lower
micron.

- Strong constitutions (ewes to rejoin with lambs at foot)
- High fly strike resistance with no body protectants used. Rate at 0.34% blown summer 2017 after 4 inches of rain in 4 weeks in March 2017.
- High fertility and doing ability to rejoin.
- Have genetically stable flock - allows predictability. Roseville Park Blood for 25 years.
- Tip and staple structure will repel dust and vegetable matter - enables high yields up to 80.6% (12 months growth).
- Heavy wool cutters - in wether trails consistently cut between 7 and 8kgs of 18-19 micron wool as adults.

A1 Ewes

Blink Bonnie Flock Breeding High Fertility & Rejoining Ability

3/4/5/6 year old ewes, marked, 128% lambs at foot, re-joined 10 weeks from start of lambing scanned 68% back in lamb carrying 85% lambs. Some ewes have lambed 3 times in 12 months. A natural and continued selection for doing-ability.

Blink Bonnie Wool Success

Last years show season Blink Bonnie won 5 highest Commercial Value Awards
